

Reliance Life develops portal

The molecular medicine group of Reliance Life Sciences has developed a portal (<http://relibrca.rellife.com>) to help the medical fraternity predict familial and/or early on-set breast cancer in Indian women. Breast cancer constitutes 18.5% of the total new cancer cases in Indian women today. The ReliBRCA portal aims to make data generated by the scientific community easily accessible to doctors and oncologists, to help identify hotspots and targets for easy intervention for 'predictive diagnosis' and possibly in 'prognosis and therapy'.
